C:\Users\daya_> javac -version
javac 1.8.0_181

C:\Users\daya_> javac
Usage: javac <options> <source files>
where possible options include:
  -g                  Generate all debugging info
  -g:none             Generate no debugging info
  -g:{lines,vars,source} Generate only some debugging info
  -nowarn             Generate no warnings
  -verbose            Output messages about what the compiler is doing
  -deprecation        Output source locations where deprecated APIs are used
  -classpath <path>   Specify where to find user class files and annotation processors
  -cp <path>          Specify where to find user class files and annotation processors
  -sourcepath <path>   Specify where to find input source files
  -bootclasspath <path> Override location of bootstrap class files
  -extdirs <dirs>      Override location of installed extensions
  -endorseddirs <dirs> Override location of endorsed standards path
  -proc:{none,only}   Control whether annotation processing and/or compilation is done.
  -processor <class1>[,<class2>,<class3>...] Names of the annotation processors to run; bypasses default discovery process
  -processorpath <path> Specify where to find annotation processors
  -parameters         Generate metadata for reflection on method parameters
  -d <directory>       Specify where to place generated class files
  -s <directory>       Specify where to place generated source files
  -h <directory>       Specify where to place generated native header files
  -implicit:{none,class} Specify whether or not to generate class files for implicitly referenced files
  -encoding <encoding> Specify character encoding used by source files
  -source <release>    Provide source compatibility with specified release
  -target <release>    Generate class files for specific VM version
  -profile <profile>   Check that API used is available in the specified profile
  -version            Version information
  -help              Print a synopsis of standard options
  -Akey[=value]       Options to pass to annotation processors
  -X                 Print a synopsis of nonstandard options
  -J<flag>            Pass <flag> directly to the runtime system
  -Werror             Terminate compilation if warnings occur
  @@<filename>        Read options and filenames from file
  
```
